

Problem

Developing blockchain apps is costly and time-consuming

Cost

\$100K - \$1MM

Duration

3 - 12 weeks

Blockchain application development is time-consuming and costly for businesses. Lack of mature tools and an ever-changing landscape is frustrating for developers.

Solution

DappStarter

TryCrypto solves these problems with DappStarter, a SaaS platform that reduces friction and accelerates development by generating full-stack blockchain application source code.

- Works with all public and private blockchains
- Easy integration with existing business systems
- SaaS freemium business model
- Beta launched and gaining fast traction
- Strong team with significant product and blockchain experience

Products & Services

DappStarter

Full-stack application generator

Select blockchain and desired features. The platform generates full-stack source code with Smart Contract and client/server application.

VIDEO

BETA

DappConnector

External data integration cloud service ("oracle")

Integrates existing business data sources seamlessly with Smart Contracts providing transaction proofs and consensus-driven data inputs.

DappGrader

Blockchain app auditing and analytics service

Audit opaque Smart Contract transaction logs and view transaction data in context. Measure transaction latency, gas cost and other blockchain-specific metrics.

Business Model

Standard SaaS freemium subscription model.

DappStarter Free for non-commercial; commercial use has pay per developer subscription.

DappConnector Free allowance with pay per request.

Market

\$2.2 billion market for SaaS-based blockchain app development by 2023

60% of CIOs planning to deploy blockchain applications in 1-2 years
